To whom it may concern,

When I was 10, my teacher told my mum to buy me the book “1000 whys, 1000 because”. I was a very curious child and that did not change. How things work, why something is the way it is and the logic behind it always drawn my attention. My entire life I was passionate about my education, learning new things and constantly improving. Currently, I am attending my third year of studies at the Faculty of Electrical Engineering of the University of Sarajevo. I study Computing and Informatics. I am expected to graduate in the summer of 2019, and would like to introduce myself as a suitable candidate for a place on the internship/training program and/or job at the AP.

Developing software that has great performance and that is efficient, safe, secure, reliable, maintainable and yet has beautiful and modern design allows me to do what I love. So far, I’ve been working on projects using C#, HTML5, CSS3, Node.js, React and you can find these projects on my GitHub profile (<https://github.com/nimsirovic1/Projekti>). This semester I was the team leader on the „Software engineering“ course project “Information system for Faculty of Electrical Engineering, University of Sarajevo”. My team worked on the module called “Exams”. This project helped me to learn a lot about teamwork, the importance of communication and organizational skills. When it comes to soft skills, I find myself to be a very communicative and open person with good presentation skills. My presentation skills have been recognized many times by other people, both colleagues and professors. I am a responsible, ambitious and adaptable person. In the March of 2019, I was a participant at Soft Skills Academy Sarajevo where I learned a lot about project management, time management, presentation skills, stress management and emotions and the importance of them for my career.

In the future, I want to focus my career on software development and testing as well as successful project management. Developing software which performs according to requirements specifications, coding and security best practices as well as making intuitive and clean user experiences that are compelling is my goal. As my Bachelor thesis is about simulation of penetration testing, I would like to learn more about it. Because of all these reasons, I believe that AP is the ideal opportunity for me to pursue my career.

During my studies, I have always been the type of person who gives her best, but I am not afraid to ask questions and I prefer long, detailed answers over short ones. I believe that all of the afore mentioned characteristics I possess are the key for a successful professional career. Furthermore, I enjoy working in teams of motivated, hard-working people, as I believe that the best results are achieved through teamwork and cooperation. I am sure that my previous work and achievements, as well as my soft skills will enable me to fulfill your expectations for a suitable candidate, and I intend to justify your trust by accomplishing the best possible results.

Thank you for your time,

Sincerely,  
Nejra Imširović
